

OSA-0852-64

10 February 1964

Dear Al:

As a result of the Suppliers Conference of 29 January at LAC dealing with Aeromedical and Life Support Systems, the following priority listing of problem areas are defined:

A. Develop parachute support block with optimum weight change response to insure minimum weight of parachute on pilots shoulders. If possible, space for small survival items should be provided. Prototype available 20 February 1964.

B. On basis of individual pilots, customize seat cushions for the survival kit. Report on progress on at least one pilot by 1 March 1964.

C. Design pan to incorporate new parachute releases and emergency oxygen supply in present parachute configuration. Eighty cu. in. of oxygen to be supplied in dual system design.

D. Continue efforts to reduce suit controller back pressure. Request report on progress by 1 March 1964.

Best regards,

  
Harry
